

# North Coast Hardwood User Directory

*North Coast Timber  
Taskforce*

Providing links for those considering using the  
fabulous range of North Coast Timbers.

# Timber – a stunning alternative

While conventional concrete and steel buildings account for immense energy consumption and high levels of carbon dioxide emissions, timber as a construction material, has gained favour as a sustainable and distinctive alternative.

There are also many social wins when using timber inside our homes and buildings. Their insulating properties can provide a comfortable, energy efficient and long-lasting finish, while the combination of natural light, organic feel and the distinctive appearance of wood has been shown to lower stress levels

*As some of the world's finest hardwoods come from the North Coast of NSW, it makes perfect sense to design with North Coast Hardwoods.*

The North Coast Timber Taskforce is an industry based , not-for-profit Association comprising industry representatives from across the North Coast of NSW and the broader community.

The goal of this project is to ensure that timber is actively considered as a primary construction material for regional building projects,

The mission of the Taskforce is to substantially improve community understanding of, support for and confidence in, the environmentally sustainable management of North Coast forests and their timber products.
